The spill response industry is always changing — and so are we!

Our engineers are constantly working to improve our existing products and develop new ones that will help your facility run more smoothly and cleanly. We are excited to share just a few of these new and improved items below.

Site visits are the most effective way for us to learn about your spill risks and discuss potential cost savings. Learn more about them on the next page.

YOU ASKED. WE LISTENED.

We heard your requests and redesigned these Smart Spill Solutions just for you!

Eco-friendly!

You asked for a mat that combines the strength of Traffic Tuff Rug with the absorbency of Recycled Tuff Rug. **Recycled Traffic Tuff Rug** does just that, plus it has the added green benefit of a 100% post-industrial recycled polyester blend construction. See **Recycled Traffic Tuff Rug** on page 57

New!

You asked us for compact, self-contained, single-use spill kits that you can take on the go. **Foil Bag Spill Kits** are packaged in a heat-sealed foil bag and packed with absorbents you need for fast spill response. Available in Universal, Oil-Only and HazMat. See **Foil Bag Spill Kits** on page 74

Redesigned!

You asked us to make **Spill Kaddie Kits** stronger and more durable. The rear step in the Kaddie's base allows you to tilt and maneuver it directly to the spill. Plus the doors open wider, making it easier to remove absorbents or refill. See **Spill Kaddie Kits** on page 67

Returning favorite!

You asked for a way to keep your drips and spills contained during routine maintenance. **Utility Trays** help keep messes off of warehouse and factory floors. Plus they're nestable for easy storage when not in use. See **Utility Trays** on page 95

Selecting the right SpillTech Mat for your needs

Determine the TYPE of liquids being absorbed:

Universal –

For oil- or water-based liquids (oils, coolants, solvents and water)

Oil Only –

For oils and oil-based liquids, not water (oil, diesel, gas, petroleum and fuels)

HazMat –

For chemicals and unknown liquids (acids, bases)

Determine the AMOUNT of liquid being absorbed:

LightWeight –

Small spill or slow drip

MediumWeight –

Consistent leak or drip, medium spill

HeavyWeight –

Flowing leak or drip, large spill

Consider the APPLICATION:

- Small leaks or drips:**
Choose a 1- or 2- ply absorbent
- Larger spills, wiping or the presence of foot traffic:**
Choose a more durable 3-ply absorbent
- Abrasive tasks:**
Choose an absorbent with a spunbond top layer to reduce linting or tearing
- Mat construction**
Check out the TechSpec on each mat presentation for details about mat construction

Light-duty cleanup

Budget Friendly Basics.

Part of making smart spill decisions is not buying more absorbent than you need. Not every job requires long-term durability or heavy-duty strength. Sometimes you need an absorbent that will let you get in, do the job, and get out. These absorbents are versatile enough to use for just about any challenge that pops up on your job site.

Smart Selection Tip:

Look for the Contractor Grade Symbol and save.

SpillTech's economical line of absorbents also come in Oil-Only Pads and Rolls (page 24-25) and Booms (page 39).

Look for the Contractor Grade Symbol and save.

If budget is your top priority, we've made it easy for you to spot our economical line of absorbents. Look for the Contractor Grade symbol at right! See our Contractor Grade Universal Pads and Rolls on pages 6-7.

Contractor Grade mats are perforated, unlike other entry-level mats. Rip off only what you need to waste less and save money.

Smart Selection Tip:

Perf-free for better performance on water!

Choosing a mat with perforations can be advantageous for some applications. If you'd like flexibility in choosing your mat size, for example, perforations allow you to take what you need and save money.

For water applications, however, perforations can be a disadvantage. Whether it's on a stream, retention pond or open water, deploying mats to soak up an oily spill on water is just the first step. You also need to retrieve them once they're saturated and heavy.

SpillTech's Responder Mats are not scored or perfed, so after doing their job, they hold together while being hauled back ashore for easier, quicker cleanup.

Oil-Only Pillows

Oil-only pillows are easy to place in hard-to-reach areas.

- Absorb high-volume leaks and spills of oil and other petroleum-based liquids on land or water
- Use under machines and leaky hydraulic hoses or wedge in corners cramped for space
- Pulls liquids from the floor like a sock, catches leaks like a pan, and absorbs spills like a pad
- Large surface area speeds the absorption process and shortens the overall response time on land or water

BUILD A CUSTOM SPILL KIT WITH JUST WHAT YOU NEED!

Get the perfect Spill Kit for your application.

If you can't find exactly what you need in our selection of pre-packed kits, we'll be glad to build one to your specifications. Answer five simple questions (at right) to help choose the type and quantity of sorbents you require, the accessories to make the response safer and the container that will work best. There's no extra charge for this service, so it's an easy way to customize your spill response plan and stock only the sorbents and PPE you really need. After you've made your list, just contact your local Distributor and we'll do the rest!

1. How much do you need to absorb?

What is your worst-case scenario? You'll need enough sorbents to clean up the maximum amount, whether it's one gallon or one hundred.

2. What liquid are you absorbing?

For multiple everyday liquids, use Universal. To soak up oil and repel water, choose Oil-Only. To alert workers to a dangerous spill, use HazMat.

3. What type of spills do you deal with?

Slops and spills use pads for quick wiping and cleanup. Drum/tank leaks need more socks for diking and Plug & Dike epoxy to stop the flow. Large-volume spills require booms for containment and pillows for more sorbency.

4. What type of PPE and accessories will you need?

Most spills call for boots, gloves and goggles. Will you need coveralls? How much chemical protection do you need? How often will you have to replace disposable items?

5. What type of container will you need?

For removing saturated sorbents, use a UN-rated Overpack/Salvage Drum. Stationary Kits can go in a flat-bottom Overpack. Movable kits require a kaddie or wheeled overpack.

Whether you're building a spill kit, collecting used absorbents or shipping damaged containers, we'll get you packed.

Our OverPacks are sturdy, chemical-resistant for years of use and come in many sizes.

Most offer integrated forklift ledges or handles, which make them easy to lift, move or carry.

Smart Selection Tip:

Overpacks vs. Salvage Drums

What's the difference?

An **OverPack** is an outer packaging that holds and protects one or more intact, undamaged smaller containers of hazardous materials. A **Salvage Drum** is a metal or plastic open-head drum, tested to DOT requirements, used to transport damaged, defective, leaking or non-conforming hazardous materials packages, or hazardous materials that have spilled or leaked.
