MANUFACTURING THE BEST FIRE EQUIPMENT SINCE 1925

PROFESSIONAL BACKPACK FIREPUMPS

SUPPRESSING & PREVENTING WILDFIRES SINCE 1925

Wildland warriors have been depending on Smith Indian Fire Pumps for over 95 years. Spawned by a need to suppress wildfires in remote locations, the siblings of legendary inventor D.B. Smith developed the Indian Fire Pump. Soon after its development, it became obvious that the portability of the pump and tank could also be used to help prevent further spread of wildfires by penetrating hot spots, wetting dry areas and providing a mechanism to do all of this before the fire spread out of control. Expanding upon its role in fire suppression, it rapidly became a staple safety item for industries seeking to prevent wildfires. Industries involved with logging, railway work & utilities started mounting these on various pieces of equipment utilized in their day to day operations.

While many innovations have been made to improve comfort and function of our wildland backpacks, the legendary 100% brass pump has remained virtually unchanged. Our engineers work with the end users to continuously seek out improvements, while maintaining the construction and reliability our customers have come to appreciate.

Much like the traditions within the Fire Service, the Indian Fire Pump has carried on many traditions of its own. The one tradition that continues to stand out within the Indian Fire Pump line and has remained since the pump's inception—is that it is still made in the U.S.A.

As a part of The Fountainhead Group's family of sprayers, the Indian Fire Pump has established a name of its own throughout the Fire Service and continues to be the most recognizable name in the wildland fire arena.

On behalf of all of us at The Fountainhead Group & Indian Fire Pumps, we would like to say THANK YOU for your continued support.

 MADE IN THE U.S.A.

INDIAN™ FIRE PUMPS

FP100 FIRE PUMP (175764)
Used on **FSV500, DBL500, DBL501**

- Designed with brass components and built to outlast any competitive pump.
- Primes up to 8x quicker than the competition and delivers more water faster.
- Large brass cylinder provides for easy pumping and bind free operation.
- Padded grip for comfort.

FP200 FIRE PUMP (175111, 180902)
Used on **90G/90S, FER500**

- Designed with brass components and built to outlast any competitive pump.
- Primes up to 8x quicker than the competition and delivers more water, faster.
- Larger cylinder provides for easy pumping and bind free operation.
- Combination nozzle can be quickly switched from straight stream to fan spray with no special tools.

FPG100 FIRE PUMP (182373)
Used on **FSV500PG**

- Designed with brass components and built to outlast any competitive pump.
- Primes up to 8x quicker than the competition and delivers more water faster.
- Large brass cylinder provides for easy pumping and bind free operation.
- Solid brass pistol grip for increased leverage and improved ergonomics.
- Padded grip for comfort.
- Combination nozzle can be quickly switched from straight stream to fan spray with no special tools.

FP300 DUAL ACTION FIRE PUMP (184316)
Used on **190653** and **190654**

- Designed with brass components and built to outlast any competitive pump.
- Pump delivers continuous flow of water, expelling water on the push and pull of each stroke.
- The nozzle spray can be easily adjusted while continuously pumping.
- Two-handed pistol grip operation allows for greater control and accuracy of the water.
- Adjustable brass nozzle easily adjusts from straight stream to spray with heavy-duty gloves on.
- Primes up to 8x quicker than the competition and delivers more water faster.
